

## Triangles

A triangle is a shape with 3 straight sides and 3 corners (angles). (Tri - three; angle)

Name	Examples	Properties
equilateral		<ul style="list-style-type: none"> <li>a regular triangle:</li> <li>3 equal sides</li> <li>3 equal angles (all <math>60^\circ</math>)</li> <li>3 lines of symmetry</li> </ul>
isosceles		<ul style="list-style-type: none"> <li>2 equal sides</li> <li>2 equal angles</li> <li>1 line of symmetry</li> </ul>
scalene		<ul style="list-style-type: none"> <li>No equal sides</li> <li>No equal angles</li> <li>No lines of symmetry</li> </ul>
right-angled triangle		<ul style="list-style-type: none"> <li>Any triangle with a right angle - can be isosceles or scalene</li> </ul>

Fact: the 3 angles of a triangle always total  $180^\circ$

### Vocabulary

equilateral  
isosceles  
scalene

side  
angle  
corner  
right angle  
equal

symmetrical  
lines of symmetry
